Stage #CF8

Pending

<length> is the length of the file in bytes

- <contents> is the contents of the file
- Note that this is NOT a RESP bulk string, it doesn't contain a `\r\n` at the end
- If you want to learn more about the RDB file format, read [this blog post](#). This challenge has a separate extension dedicated to reading RDB files.

Important for those that might be stuck: first write the string containing the length of the file, and then write the actual binary content of the file. I was stuck for a while trying to send it all together.
