## Tests

The tester will run a series of tests with `test.1ox` files that contain the assignment operation.

For example, if `test.1ox` contains the following

```
{  
    var foo = "before";  
    print foo;  
}  
{  
    var foo = "after";  
    print foo;  
}
```

The tester will run your program like this:

```
$ ./your_program.sh run test.1ox  
before  
after
```

The tester will run multiple such tests with randomized expressions, for example:

Test Case 1:

 kishan...

 dolphi...

 tasnuv... **0 / 48**
