## Your Task

PendingShare Feedback

MEDIUM

In this stage, you'll parse the correlation ID from a request and send a response with the same correlation ID.

## Request header format

In the previous stage, we saw that the request starts with a 4 byte length field, followed by the request header, and then the request body.

The format of the request header is as follows:

Field Name	Field Type	Description
request_api_key	INT16	The API key for the request
request_api_version	INT16	The version of the API for the request
correlation_id	INT32	A unique identifier for the request
