

[Instructions](#) [Code Examples](#) [Forum](#)Stage #ML2 **Pending**

() // Comment

The tester will run your program like this:

```
$ ./your_program.sh tokenize test.lox
LEFT_PAREN ( null
RIGHT_PAREN ) null
EOF null
```

Similarly, if test.lox contains the following:

/()

The tester will run your program like this:

```
$ ./your_program.sh tokenize test.lox
SLASH / null
LEFT_PAREN ( null
RIGHT_PAREN ) null
EOF null
```

The tester will assert that the stdout of your program matches the format
