

For example, let's say the RDB file contains two keys: `foo` and `bar`. The expected response will be:

```
*2\r\n$3\r\nfoo\r\n$3\r\nbar\r\n
```

- `*2\r\n` indicates that the array has two elements
- `$3\r\nfoo\r\n` indicates that the first element is a bulk string with the value `foo`
- `$3\r\nbar\r\n` indicates that the second element is a bulk string with the value `bar`
