

Tests

The tester will execute your program with a `--directory` flag. The `--directory` flag specifies the directory to create the file in, as an absolute path.

```
$ ./your_program.sh --directory /tmp/
```

The tester will then send a `POST` request to the `/files/{filename}` endpoint on your server, with the following parts:

- `Content-Type` header set to `application/octet-stream`.
- `Content-Length` header set to the size of the request body, in bytes.
- Request body set to some random text.

```
Content-Type: application/octet-stream" http://localhost:4221/files/file_123
```

Your server must return a `201` response:

```
HTTP/1.1 201 Created\r\n\r\n
```

Your server must also create a new file in the files directory, with the
