Stage #ZG5

Pending

1. The parameter **name**, encoded as a [RESP Bulk string](#)
2. The parameter **value**, encoded as a RESP Bulk string

For example, if the value of `dir` is `/tmp/redis-files`, then the expected response to `CONFIG GET dir` is:

```
*2\r\n$3\r\nmdir\r\n$16\r\n/tmp/redis-files\r\n
```

Notes

- You don't need to read the RDB file in this stage, you only need to store `dir` and `dbfilename`. Reading from the file will be covered in later stages.
- If your repository was created before 5th Oct 2023, it's possible that your `./spawn_redis_server.sh` script is not passing arguments to your program. To fix this, you'll need to edit `./spawn_redis_server.sh`. Check the [update CLI args PR](#) for details on how to do this.
