Stage #CF6

Pending

Your server should respond with `$3\r\n0-1\r\n`, which is `0-1` encoded as a [RESP bulk string](#).

The tester will then send a `TYPE` command to your server.

```
$ redis-cli TYPE stream_key  
"stream"
```

Your server should respond with `+stream\r\n`, which is `stream` encoded as a [RESP simple string](#).

## Notes

- You still need to handle the "string" and "none" return values for the `TYPE` command. "stream" should only be returned for keys that are streams.
