Tests

The tester will execute your program like this:

```
$ ./spawn_redis_server.sh
```

It'll then create a few entries.

```
$ redis-cli XADD stream_key 0-1 foo bar
$ redis-cli XADD stream_key 0-2 bar baz
$ redis-cli XADD stream_key 0-3 baz foo
```

It'll then send an `XRANGE` command to your server.

```
$ redis-cli XRANGE stream_key 0-2 +
```

Your server should respond with the following:

```
*2\r\n
*2\r\n
$3\r\n0-2\r\n
*2\r\n
$3\r\nbar\r\n
$3\r\nbaz\r\n
*2\r\n
$3\r\n0-3\r\n
*2\r\n
$3\r\nbaz\r\n
$3\r\nfoo\r\n
```
