# Runtime Errors: Relational Operators #IB5 Pending

Complete previous stages to gain access to this stage.

Instructions

Code Examples

Forum

## Your Task

Pending[Share Feedback](#)

MEDIUM

In this stage, you'll add support for handling runtime errors while evaluating the relational operators `>`, `<`, `>=` & `<=`.

## Book reference

The code for this stage is implemented in [Section 7.3: Runtime Errors](#).

## Tests

The tester will test your program using a `test.1ox` file that contains an expression with the relational operator `>`, `<`, `>=` or `<=`. This expression will contain a usage of the relational operator that should throw a runtime error.

The relational operators `>`, `<`, `>=` & `<=` will throw a runtime error if the operands are not numbers.
