VERY EASY

Before starting this stage, make sure you've read the "Welcome" section of the book that contains these chapters:

- [Introduction](#) (chapter 1)
- [A Map of the Territory](#) (chapter 2)
- [The Lox Language](#) (chapter 3)

These chapters don't involve writing code, so they won't be covered in this challenge. This challenge will start from chapter 4, [Scanning](#).

In this stage, you'll implement basic support for the `tokenize` command.

The `tokenize` command

The `tokenize` command tokenizes a Lox program and prints the tokens to stdout. We'll use this for testing all stages in the [Scanning](#) chapter.

If there's a file named `test.lox` with the following contents:
