For a while I was getting this error, and getting very confused:

```
remote: [replication-11] Received: ""
remote: [replication-11]           ^ error
remote: [replication-11] Error: Expected start of a new RESP value (either +, -, :, $ or *)
remote: [replication-11] Test failed
```

I think it means that the replica wasn't receiving anything. I think that what I was doing wrong was that the master was creating a new connection to the replica's port in order to propagate the messages, but it was supposed to reused the original connection that the replica had created for the handshake.
