Stage #BW1

Pending

It'll then try to connect to your TCP server on the specified port number (6380 in the example above). If the connection succeeds, you'll pass this stage.

Notes

- Your program still needs to pass the previous stages, so if `--port` isn't specified, you should default to port 6379.
- The tester will pass a random port number to your program, so you can't hardcode the port number from the example above.
- If your repository was created before 5th Oct 2023, it's possible that your `./spawn_redis_server.sh` script might not be passing arguments on to your program. You'll need to edit `./spawn_redis_server.sh` to fix this, check [this PR](#) for details.
