MEDIUM

In this stage, you'll add support for the `POST` method of the `/files/{filename}` endpoint, which accepts text from the client and creates a new file with that text.

Request body

A request body is used to send data from the client to the server.

Here's an example of a `POST /files/{filename}` request:

```
// Request line
POST /files/number HTTP/1.1
\r\n

// Headers
Host: localhost:4221\r\n
User-Agent: curl/7.64.1\r\n
Accept: */*\r\n
Content-Type: application/octet-stream // Header that specifies the fo
Content-Length: 5\r\n                 // Header that specifies the si
\r\n

// Request Body
```
