EASY

In this stage, you'll add support for handling the `INCR` command when a key does not exist.

Recap

The implementation of `INCR` is split into three stages:

- Key exists and has a numerical value (previous stages)
- Key doesn't exist (**This stage**)
- Key exists but doesn't have a numerical value (later stages)

When a key doesn't exist, `INCR` sets the value to 1. Example:

```
$ redis-cli INCR missing_key
(integer) 1
$ redis-cli GET missing_key
"1"
```

Tests

The tester will execute your program like this:

```
$ ./spawn_redis_server.sh
```

Ready to run tests...
