

Tests

The tester will execute your program like this:

```
$ ./spawn_redis_server.sh
```

The tester will then connect to your server as a Redis client and run the following commands:

```
$ redis-cli
> INCR foo (expecting ":1\r\n" as the response)
> INCR bar (expecting ":1\r\n" as the response)
```

Notes

- Your implementation still needs to pass the tests in the previous stage.
