

[Instructions](#) [Code Examples](#) [Forum](#)Stage #ET2 **Pending**

&lt;&lt;=&gt;&gt;=

The tester will run your program like this:

```
$ ./your_program.sh tokenize test.lox
LESS < null
LESS_EQUAL <= null
GREATER > null
GREATER_EQUAL >= null
EOF null
```

The tester will assert that the stdout of your program matches the format above.

## Notes

- This output format matches the spec in the [book's repository](#)
- When scanning for tokens, it's valid to have "unbalanced" parentheses or braces. When we get to parsing expressions in later stages, these cases will be highlighted as errors.
