

[Instructions](#) [Code Examples](#) [Forum](#)Stage #YU6 **Pending**

The binary operators `*` & `/` will throw a runtime error if the operands are not both numbers.

For example, if `test.lox` contains the following:

```
"foo" / 42
```

The tester will run your program like this:

```
$ ./your_program.sh evaluate test.lox
Operands must be numbers.
[line 1]
```

The tester will run multiple such tests with randomized expressions, for example:

Input	Expected output
"foo" * 42	Operands must be numbers.
true / 2	Operands must be numbers.
("foo" * "bar")	Operands must be numbers.
false / true	Operands must be numbers.
