

[Instructions](#) [Code Examples](#) [Forum](#)Stage #DC1 **Pending**

-(73)

The tester will run your program like this:

```
$ ./your_program.sh evaluate test.1ox
-73
```

The tester will run multiple such tests with randomized expressions, for example:

Input	Expected output
-73	-73
!true	false
!10.40	false
!((false))	true

The tester will assert that the stdout of your program matches the format above.
