

[Instructions](#) [Code Examples](#) [Forum](#)Stage #XE6 **Pending**

For example, if `test.lox` contains the following:

```
("foo")
```

The tester will run your program like this:

```
$ ./your_program.sh parse test.lox  
(group foo)
```

The tester will assert that the stdout of your program matches the format above.

## Notes

- This output format matches the spec in the [book's repository](#)
- Errors for unclosed parentheses are not checked in this stage, they'll be checked in later stages.
