Looking for inspiration on how to write a clean Redis protocol parser? Open-source Redis clients are a great place to start!

Examples:

- [Redcon](#) (Go)
- [Carmin](#)e (Clojure)
- [Redix](#) (Elixir)
- [Jedis](#) (Java)

In case anyone else ~~doesn't print what they receive during tests~~ gets stuck since this is also the first stage that resp received has to be parsed, tests are made sending lowercase commands rather uppercase as may appear from problem descriptions. Also note that in genera Redis commands are case-insensitive.
