

on the first part of the handshake: sending `PING` to the master.

Tests

The tester will execute your program like this:

```
oawn_redis_server.sh --port <PORT> --replicaof "<MASTER_HOST> <MASTER_PORT>"
```

It'll then assert that the replica connects to the master and sends the `PING` command.

Notes

- The `PING` command should be sent as a RESP Array, like this :
`*1\r\n$4\r\nPING\r\n`
