

[Instructions](#) [Code Examples](#) [Forum](#)Stage #UH4 **Pending**

The tester will run a series of tests with `test.lox` files that contain comparison operators, combined with previously introduced tokens.

For example, if `test.lox` contains the following:

```
83 < 99 < 115
```

The tester will run your program like this:

```
$ ./your_program.sh parse test.lox
(< (< 83.0 99.0) 115.0)
```

The tester will assert that the stdout of your program matches the format above.

Notes

- This output format matches the spec in the [book's repository](#)
