

```
Accept: */*\r\n\r\n
```

```
// Request body (empty)
```

Here is the expected response:

```
// Status line
HTTP/1.1 200 OK           // Status code must be 200
\r\n

// Headers
Content-Type: text/plain\r\n
Content-Length: 12\r\n
\r\n

// Response body
foobar/1.2.3              // The value of `User-Agent`
```

## Tests

The tester will execute your program like this:

```
$ ./your_program.sh
```

The tester will then send a GET request to the /user-agent endpoint on your server. The request will have a User-Agent header
