

[Instructions](#) [Code Examples](#) [Forum](#)Stage #VT6 **Pending**

- The `topic_id` field in the response should be equal to `00000000-0000-0000-0000-000000000000`.
- The `partitions` field in the response should be empty. (As there are no partitions assigned to this non-existent topic.)

Notes

- You'll need to parse the `DescribeTopicPartitions` request in this stage to get the topic name to send in the response.
- For now, you can assume that all topics are "unknown". We'll work on identifying actual vs. unknown topics in later stages.
- The official docs for the `DescribeTopicPartitions` request can be found [here](#).
