

Input

Expected output

`"hello" + " world!"``hello world!``"42" + "24"``4224``"foo" + "bar"``foobar`

The tester will assert that the stdout of your program matches the format above.

Notes

- This output format matches the spec in the [book's repository](#)
- In this stage, you can assume we will not test for error cases. Runtime errors will be introduced in later stages. For now, we will only pass 2 strings to the `+` operator in this stage.
