MEDIUM

In this stage, you'll add support for scopes in your interpreter. Scopes are created by blocks, and they are used to group variables together. We will test variables in local scopes, nested scopes, shadowing of variables, and accessing variables outside of the scope where they are defined.

## Book reference

The code for this stage is implemented in [Section 8.5: Scope](#).

## Tests

The tester will run a series of tests with `test.lox` files that contain the assignment operation.

For example, if `test.lox` contains the following
