

Field Name	Field Type	Description
request_api_key	INT16	The API key for the request
request_api_version	INT16	The version of the API for the request
correlation_id	INT32	A unique identifier for the request
client_id	NULLABLE_STRING	The client ID for the request
tagged_fields	TAGGED_FIELDS	Optional tagged fields

The documentation for this can be found [here](#) under the "Request Header v2" section.

- `request_api_key` : An integer identifying the request type.
  - The value of this field is different for each type of request.
  - For example, the `APIVersions` request has a `request_api_key` of `18`.
  - A full list of API keys can be found in [the docs](#).
- `request_api_version` : The version of the API to use for the request.
  - For example, the `APIVersions` request supports multiple versions: 0, 1, 2, 3 and 4.
