

DISCARD

Tests

The tester will execute your program like this:

```
$ ./spawn_redis_server.sh
```

The tester will then connect to your server as a Redis client, and send multiple commands using the same connection:

```
$ redis-cli
> MULTI
> SET foo 41 (expecting "+QUEUED\r\n")
> INCR foo (expecting "+QUEUED\r\n")
> DISCARD (expecting "+OK\r\n")
> GET foo (expecting "$-1\r\n" as the response)
> DISCARD (expecting "-ERR DISCARD without MULTI\r\n" as the response)
```
