

## Input

## Expected output

57 &gt; -65

true

11 &gt;= 11

true

(54 - 67) &gt;= -(114 / 57 + 11)

true

The tester will assert that the stdout of your program matches the format above.

## Notes

- This output format matches the spec in the [book's repository](#).
- In this stage, you can assume we will not test for error cases. Runtime errors will be introduced in later stages. For now, all relational operations will involve only two numbers.
