

[Instructions](#) [Code Examples](#) [Forum](#)Stage #IB5 **Pending**

The relational operators `>`, `<`, `>=` & `<=` will throw a runtime error if the operands are not numbers.

For example, if `test.1ox` contains the following:

```
17 > "bar"
```

The tester will run your program like this:

```
$ ./your_program.sh evaluate test.1ox
Operands must be numbers.
[line 1]
```

The tester will run multiple such tests with randomized expressions, for example:

Input	Expected output
"foo" < false	Operands must be numbers.
true < 2	Operands must be numbers.
("foo" + "bar") < 42	Operands must be numbers.
false > true	Operands must be numbers.
