EASY

In this stage, you'll add support for handling expression statements. An expression statement lets you place an expression where a statement is expected. They exist to evaluate expressions that have side effects.

Book reference

The code for this stage is implemented in [Section 8.1: Statements](#).

Tests

The tester will run a series of tests with `test.lox` files that contain expressions that have side effects, combined with the `print` statement.

For example, if `test.lox` contains the following
