Share Feedback

MEDIUM

In this stage, you'll add support for parsing equality operators: `==` & `!=`.

Book reference

The code for this stage is implemented in [Section 6.2: Recursive Descent Parsing](#).

Tests

The tester will run a series of tests with `test.lox` files that contain comparison operators, combined with previously introduced tokens.

For example, if `test.lox` contains the following:

```
"baz" == "baz"
```
