

[Instructions](#) [Code Examples](#) [Forum](#)Stage #WA9 **Pending**

The tester will run a series of tests with `test.lox` files that contain multiplicative algebraic operators, combined with previously introduced tokens.

For example, if `test.lox` contains the following:

```
16 * 38 / 58
```

The tester will run your program like this:

```
$ ./your_program.sh parse test.lox  
(/ (* 16.0 38.0) 58.0)
```

The tester will assert that the stdout of your program matches the format above.

## Notes

- This output format matches the spec in the [book's repository](#).
