Stage #ZG5

Pending

The important parts are those before the `...`.

Small note: the database file passed in this stage doesn't actually exist, however the db server should start as if nothing is wrong, so that the test can execute the commands.

That caused some head scratching for me in next stage.

If you receive this error when using the CodeCrafters CLI tool or pushing with Git when using Elixir.

```
[your_program] ** (Mix) No such file: --dir .
```

That means Mix is receiving the `--dir` argument instead of your Elixir application.

Update the `language_pack` to the latest supported elixir language pack (it's currently `elixir-1.16` while writing) in the `codecrafters.yml` to resolve this issue

```
# Set this to true if you want debug logs.
#
# These can be VERY verbose, so we suggest turning them off
# unless you really need them.
debug: false

# Use this to change the Elixir version used to run your code
# on Codecrafters.
#
# Available versions: elixir-1.16
language_pack: elixir-1.16 <----- HERE
```
