

[Instructions](#) [Code Examples](#) [Forum](#)Stage #TH5 **Pending**

The tester will run a series of tests with `test.lox` files that contain string literals, it can contain whitespaces, and numbers too, but everything is inside double quotes.

For example, if `test.lox` contains the following:

```
"hello"
```

The tester will run your program like this:

```
$ ./your_program.sh parse test.lox  
hello
```

The tester will assert that the stdout of your program matches the format above.

Notes

- This output format matches the spec in the [book's repository](#)
