📄 **Instructions**   </> Code Examples   💬 Forum   Stage #LV1   (Pending)

"hello world!"

The tester will run your program like this:
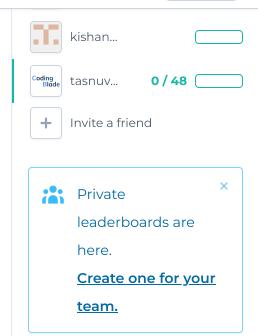

```
$ ./your_program.sh evaluate test.lox
hello world!
```

The tester will run multiple such tests with randomized expressions, for example:

Input	Expected output
"hello world!"	hello world!
10.40	10.4
10	10

The tester will assert that the stdout of your program matches the format above.

Notes

- This output format matches the spec in the **book's repository**
