📄 **Instructions**   **Stage #JM1**   ✓ **Completed**

servers are. You'll learn more about this in the next stages.

Tests

The tester will execute your program like this:

```
$ ./spawn_redis_server.sh
```

It'll then try to connect to your TCP server on port 6379. If the connection succeeds, you'll pass this stage.

Notes

- 6379 is the default port that Redis uses.

- If you already have a Redis server running on your machine and listening on port 6379, you'll see a "port already in use" error when running your code. Try stopping the existing Redis server and running your code again.
