Read data from multiple columns #VC9   (Pending)

Complete previous stages to gain access to this stage.

📄 **Instructions**   </> Code Examples   💬 Forum

Your Task   (Pending)   HARD

This stage is similar to the previous one, just that the tester will query for multiple columns instead of just one.

Here's how the tester will execute your program:

```
$ ./your_sqlite3.sh sample.db "SELECT name, color FROM apples"
```

and here's the output it expects:

```
Granny Smith|Light Green
Fuji|Red
Honeycrisp|Blush Red
Golden Delicious|Yellow
```

Just like in the previous stage, the order of rows doesn't matter.
