```
                    "37",
                    "humidity",
                    "94"
                ]
            ]
          ]
        ]
      ]
```

When encoded as RESP, it looks like this:

```
*1\r\n
*2\r\n
$8\r\nsome_key\r\n
*1\r\n
*2\r\n
$15\r\n1526985054079-0\r\n
*4\r\n
$11\r\ntemperature\r\n
$2\r\n37\r\n
$8\r\nhumidity\r\n
$2\r\n94\r\n
```

The lines are separated into new lines for readability. The return value is just one line.

 XREAD supports other optional arguments, but we won't deal with them right now.

Tests

The tester will execute your program like this:

```
$ ./spawn_redis_server.sh
```

First, an entry will be added.
