expressions with the relational operators `>` , `<` , `>=` & `<=` .

For example, if `test.lox` contains the following:

```
10 > 5
```

The tester will run your program like this:

```
$ ./your_program.sh evaluate test.lox
true
```

The tester will run multiple such tests with randomized expressions, for example:

Input	Expected output
57 > -65	true
11 >= 11	true
(54 - 67) >= -(114 / 57 + 11)	true

The tester will assert that the stdout of your program matches the format above.

Tests failed. ❓ [Show logs]
