Serial requests #NH4   Pending

Complete previous stages to gain access to this stage.

📄 **Instructions**   </> **Code Examples**   💬 **Forum**

Your Task   Pending   Share Feedback   MEDIUM

In this stage, you'll add support for handling multiple sequential requests from the same client.

Tests

The tester will execute your program like this:

```
$ ./your_program.sh
```

It'll then connect to your server on port 9092 and send a `APIVersions` (v4) request, read the response, & validate the response.

Once a response is received, the tester will re-use the same connection to send multiple other `APIVersions` (v4) requests.
