Your Task   (Pending)   Share Feedback   MEDIUM

In this stage, you'll add extend support to `XREAD` to allow querying multiple streams.

Tests

The tester will execute your program like this:

```
$ ./spawn_redis_server.sh
```

First, an entry will be added to a couple of streams.

```
$ redis-cli XADD stream_key 0-1 temperature 95
$ redis-cli XADD other_stream_key 0-2 humidity 97
```

It'll then send an `XREAD` command to your server with multiple streams.

```
$ redis-cli XREAD streams stream_key other_stream_key 0-0 0-1
```

Your server should respond with the following:

```
*2\r\n
*2\r\n
$10\r\nstream_key\r\n
*1\r\n
```
