Stage #FB4   (Pending)

Expected Output:

```
inner hello
outer hello
Undefined variable 'hello'.
[line 9]
```

The tester will assert that the stdout of your program matches the format above, and that the exit code is 0. Accessing a variable outside of its scope should throw a runtime error, the exit code in that case should be 70.

Notes

- This output format matches the spec in the **book's repository**
