In this stage, you'll add support for the DISCARD command.

The DISCARD command

DISCARD is used to abort a transactions. It discards all commands queued in a transaction, and returns `+OK\r\n` .

Example:

```
$ redis-cli
> MULTI
OK
> SET foo 41
QUEUED
> DISCARD
OK
> DISCARD
(error) ERR DISCARD without MULTI
```

In the above example, note that the first `DISCARD` returns `OK` , but the second `DISCARD` returns an error since the transaction was aborted.
