For example, if `test.lox` contains the following

```
var a = 1;
var a = 2;
print a;
```

The tester will run your program like this:

```
$ ./your_program.sh run test.lox
2
```

The tester will run multiple such tests with randomized expressions, for example:

Test Case 1:

Input:

```
var baz = "before";
print baz;
var baz = "after";
print baz;
```
