Parse API Version #NC5 (Pending)

Complete previous stages to gain access to this stage.

📄 **Instructions**   </> **Code Examples**   💬 **Forum**

Your Task (Pending) [Share Feedback]   MEDIUM

In this stage, you'll parse the `api_version` field from a request and respond with an error if the version is unsupported.

🚧 **We're still working on instructions for this stage**. You can find notes on how the tester works below.

In the meantime, please use **this link** to ask questions on the forum.

Tests

The tester will execute your program like this:

```
$ ./your_program.sh
```

It'll then connect to your server on port 9092 and send a `APIVersions`
