Instructions   </> Code Examples   💬 Forum

Stage #CQ1   (Pending)

The binary operators `+` & `-` will throw a runtime error if the operands are not both numbers or both strings.

For example, if `test.lox` contains the following:

```
17 + "bar"
```

The tester will run your program like this:

```
$ ./your_program.sh evaluate test.lox
Operands must be two numbers or two strings.
[line 1]
```

The tester will run multiple such tests with randomized expressions, for example:

Input	Expected output
`"foo" + true`	`Operands must be numbers.`
`42 - true`	`Operands must be numbers.`
`true + false`	`Operands must be numbers.`
`"foo" - "bar"`	`Operands must be numbers.`
