42

The tester will run your program like this:

```
$ ./your_program.sh tokenize test.lox
NUMBER 42 42.0
EOF  null
```

Just like strings, number literals have a "literal value" attached. Note that the literal value for an integer is represented as "42.0" (with a decimal point). This matches the **book's format**.

You'll also need to handle numbers with a decimal point, for example if `test.lox` contains the following:

```
1234.1234
```

The tester will run your program like this:

```
$ ./your_program.sh tokenize test.lox
NUMBER 1234.1234 1234.1234
EOF  null
```
