Your Task (Pending) **Share Feedback**   EASY

In this stage you'll implement support for the `REPLCONF GETACK` command that a master sends a replica.

ACKs

▶ Click to expand/collapse

The `REPLCONF GETACK` command

▶ Click to expand/collapse

Tests

The tester will execute your program like this:

```
./spawn_redis_server.sh --port <PORT> --replicaof "<HOST> <PORT>"
```

Just like in the previous stages, your replica should complete the handshake with the master and receive an empty RDB file.

The master will then send `REPLCONF GETACK *` to your replica. It'll expect to receive `REPLCONF ACK 0` as a reply.
